

The accentuation of the genitive of '3' in Sanskrit and Indo-Iranian

While in one late RV hymn (10.185.1), the genitive plural of the numeral *trí-* is attested as a completely regular *i*-stem form *trīñām*, all later Old Indo-Aryan texts (starting from the Yajurveda) exhibit a different, synchronically suppletive form *trayāñām* (also acknowledged by Pāṇini 7.1.53). Burrow (1959: 258) explained this as a replacement of an older **trayām* = Avestan *θraiiqm* and indeed, the irregular form of later Indo-Aryan would be difficult to explain if Rigvedic *trīñām* were the original form (instead, this form is considered an innovation by Eichner 1982: 186f. n. 88). Therefore, it is probable that the Proto-Indo-Iranian (PIIr) and Proto-Indo-Aryan (PIA) form was **traya(H)am*.

Until now I have avoided to mark accentuation, the reason being that there are contradictory statements. Burrow writes *tráyāñām* and reconstructs a barytone form **tráyām*, and the same is done by Hoffmann (1976: 561 n. 2), Eichner (1982: 152, 185 n. 83), and Emmerick (1992: 166) who, following Wackernagel & Debrunner (1930: 346f.), also explicitly dismiss *trayāñām* as secondary. This latter form, however, is given nearly everywhere else since Bopp (1863: 157f.), and seems to be implied by Pāṇini 6.1.179.

What is the reason for this apparent confusion? An explicit argumentation is found in Wackernagel & Debrunner (followed by Eichner): They cite the earliest attestation of the form in Taittirīya Saṃhitā 3.4.3.8 as *tráyāñām* and use this as an argument against the assumption that this form belongs to *trayá-* 'threefold'. Indeed, *tráyāñām* is the form given by Weber in his edition of TS (p. 292), without any variants. However, this is not only contradicted by Taittirīya-Brāhmaṇa 3.9.3.3 *trayāñām-trayāñām* (within the very same Vedic school) and by *trayāñām* ŚBK 4.1.4.13, but also by all other editions of the TS itself where we only¹ find *trayāñām* which is accordingly the only form given by the VWC (I,3 1507a; II,1 699a). In addition, only the oxytone form is grammatically expected, since all other oblique case forms of the word are oxytone (*tribhīś*, *tribhyás*, *triṣū*). The only evidence for *tráyāñām* is the text of Weber's edition, and as long as we do not have information about actual manuscript readings, the available data can only lead to the conclusion that *tráyāñām* is an error of that edition, and this ghost form should be deleted from the records of Sanskrit, Indo-Iranian and Indo-European linguistics. The Vedic form was *trayāñām* which then is probably refashioned from PIA **trayām* = Av. *θraiiqm* < PIIr **tray-áHam*.

As PIIr **trayáHam* must be an archaism, this means that Indo-Iranian points to PIE **trej-óHom* with oxytone accent; there is no concrete evidence for barytone **tréj-oHom*.
